Web Development

Amazon Kindle Books Library

Topic: **Portfolio Website**
Submission Date: **13 May 2022**
Time: **12:00 noon.**

Submissions will be done by sharing a github link to your project on Slack to your facilitator or mentor.

Below is a design snippet for a portfolio website to get you started.
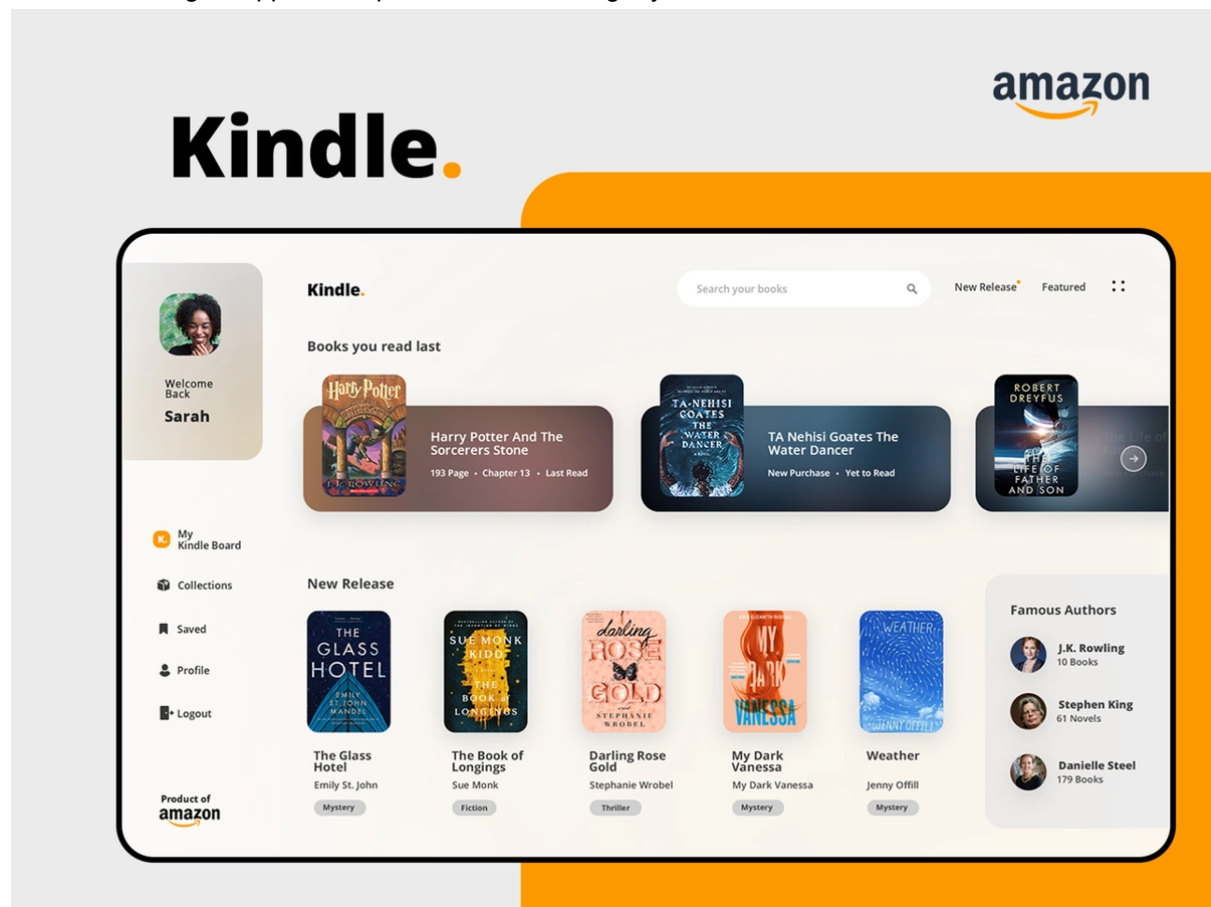

Instruction
Create a books library mimicking that of Amazon Kindle using Html, CSS and Javascript. We have attached a design we would like you to follow as a guide in achieving the final results.

- ○ Use arrays to store to temporary hardcoded data for your list items.
- ○ Use real data for books, images, overall content for the single page.
- ○ Design and add a login and registration page for the landing page.
- ○ The user must login before being able to access the landing page.

- The user registration details must be stored on a temporary array, which will be used to login in the user on the platform.
- The following details must be on the registration form:
    - Name and Surname.
    - Email address.
    - Phone Number.
    - Image.
